                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ъ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This polypeptide comprises a 53 kDa BRCA1 modulator protein that binds to the tumour suppressor gene product BRC1, and which is characterised by a zinc finger domain and a laucine zipper motif. Its amino acid sequence was deduced from the nucleotide sequence of a cDNA clone (see AAV99062), designated 091-21A31 (ATCC 98141), cisolated from a HeLa cell cDNA library using a yeast two-hybrid assay. 3 cDNA clones (see also AAV29063-64) coding for BRCA1 modulator proteins (see AAW39881-83) have been characterised. Vectors and host cells comprising the isolated nucleic acid sequences are claimed, as well as a process for producing BRCA1 modulator protein by culturing these host cells. BRCA1 modulator proteins and nucleic acids can be used to diagnose diseases involving unwanted cell growth, e.g. breast cancer, and to identify compounds that alter alsease involving unwanted cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches 187;

It has been suggested that different host cell factors (e.g. proteins) interact with different regions of the BRCA1 to control its function. The identification of these proteins (e.g. BRCA1MP) will facilitate the development of novel diagnostic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alterations in the amino acid sequence of BRCAl causes breast and cancers by removing the controls on cell growth and proliferation Research has shown that different regions on the BRCAl molecule h
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a modulator protein, that binds to modulate the activity of the BRCAl gene product (BRCAl). The BRCAl protein has been characterized as a tumour suppressor protein.

Mitosin is first synthesised at the G1/S boundary, it is then phosphorylated from S through M phase, and during mitosis, is closely associated with the centromeres/kinetochores at the mitotic spindle poles. Mitosin is necessary for a eukaryotic cell to enter the M phase of the mitotic cell cycle and its degradation is necessary for a cell to advance on to the next stage. Mitosin is thus useful for controlling cell growth as overexpression of mitosin prevents a cell from exiting the M phase.

An anti-mitosin antibody, antibody fragment or a phosphorylated mitosin antibody and antibody fragment or a phosphorylated mitosin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  An anti-mitosin antibody, antibody fragment or a phosphorylated mitosin mutein ( or nucleic acid encoding it) can also be used to inhibit cell division which is particularly useful for the study of the cell cycle. A further use is to control hyperproliferative cells, and so control diseases such as psoriasis and breast cancer. It can also be used to
                                                                                                                                          1641

necessary for the cell to ente mitosis. The protein's degradation is also necessary for the cell to advance into the next stages of mitosis. The mitosin protein, can be used to control the growth of cells. An centi-mitosin antibody, a mutant or a non-functional analogue of mitosin can the mitotic cell cycle by preventing the cells from entering the M phase, and over expression of mitosin or its functional cequivalent, would inhibit the cycle by preventing cells from leaving the M phase. Antagonists to this protein can be used to control the Myperproliferative cells in, (e.g. thyroid hyperplasia, Grave's disease, psoriasis, benign prostatic hypertrophy, Li-Fraumeni syndrome, breast cancer, sarcomas and other neoplasms, bladder cancer, colon cancer, culling cancer and various leukaemias and lymphomas). Reintroduction or supplementation of lost mitosin function by introduction of the protein or nucleic acid encoding the protein into a cell can restore defective chromosome segregation, which is a marker of progressing malignancy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Domain

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A 372 kDa human kinetochore protein, CENP-F (AAR99795), is detected by immunofluorescence microscopy only during the G2 and M phases of a cell cycle. It is the product of a cDNA clone (AAT34578) isolated from a breast carcinoma cDNA library. Recombinant CENP-F can be produced by expression in prokaryotic or eukaryotic host cells. CENP-F can be used to detect autoimmune antibodies to the protein, which may provide an early diagnosis for the onset of various malignant diseases. Use of CENP-F as a cell cycle marker allows the specific detection of G2 and M phase cells.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primers sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human cDNA sequences; AAB92446 to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ota T,

The present invention describes the regulation of spermatogenesis by using Mea-2 information. A non-human living organism can have its spermatogenesis inhibited by breakage of the whole or part of the Mea-2 gene. Also described are: (1) the creation of the spermatogenesis-inhibited organism; (2) a drug composition containing an oligonucleotide or polynucleotide containing base sequences that pair with at least part of the Mea-2 gene and are able to inhibit the expression of Mea-2 gene; and (3) the creation of an aimed gene-possessing organism using the spermatogenesis inhibited organism. The organism is useful for producing

The invention relates to novel human secreted polypeptides. The CC polypeptides and antibodies to the polypeptides are useful for determining the presence of or predisposition to a disease associated CC with altered levels of polypeptide. The polypeptides are also useful for identifying agents (agonists and antagonists) that bind to them. Cells expressing the proteins are useful for identifying a therapeutic agent for use in treatment of a pathology related to aberrant expression or physiological interactions of the polypeptide. Vectors comprising the nucleic acids encoding the polypeptides and cells genetically cengineered to express them are also useful for producing the proteins. The proteins are useful in genetic vaccination, testing and the proteins are useful in genetic vaccination, testing and in the proteins are used as nutritional supplements. They may be used to increase stem cell proliferation; to regulate haematopoiesis; and in CC increase stem cell proliferation; to regulate haematory agents; and in treatment of leukaemias. AAU29510-AAU33304 represent the amino acid contents of novel human secretaed proteins as anti-inflammatory agents; and contents of novel human secretaed proteins as for the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding a range of human polypeptides, useful in vaccination, testing and therapy \boldsymbol{\cdot}

                                                                                                                               Matches
                                                                                                                                                                                                                   PCR was performed on total cellular RNA from 5 AMML patients having a pericentric inversion of chromosome-16, M4Eo subtype. Sequencing showed the inv(16) fusion to comprise a sequence from the CBFB gene, encoding a novel transcription factor, and the MYH11 gene, encoding smooth muscle myosin heavy chain. In 3 patients, nt 1-492 of the CBFB gene were fused to nt 1921 of MYH11 (shown in AAQ84588; predicted as sequence in AAR66929). Probes based on inv(1

                                                                                                                         PCR was performed on total cellular RNA from 5 AMML patients having a pericentric inversion of chromosome-16, M4Eo subtype. Sequencing showed the inv(16) fusion to comprise a sequence from the CBFB gene, encoding a novel transcription factor, and the MYHI1 gene, encoding smooth muscle myosin heavy chain. In 1 patient, nt 1-492 of the CBFB gene were fused to nt 1201 of MYHI1 (shown in AAQ84590; predicted as sequence in AAR66931). Probes based on inv(1
                                                                                                                                                                                                                                                                                                                                                                                                                (UNMI )
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             09-FEB-1995.

                                                                                                                                           PCR was performed on total cellular RNA from 5 AMML patients having a pericentric inversion of chromosome-16, M4Eo subtype. Sequencing showed the inv(16) fusion to comprise a sequence from the CBFB gene, encoding a novel transcription factor, and the MYH11 gene, encoding smooth muscle myosin heavy chain. In 1 patient, nt 1-492 of the CBFB gene were fused to nt 994 of MYH11 (shown in AAQ84589; predicted aa sequence in AAR66930). Probes based on inv(can be used for diagnosis of AMML.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (UNMI)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This is the bovine lactoferrin binding protein (LBP) of Streptococcus uberis su-1. Its amino acid sequence was deduced from the novel isolated lbp gene (see AAV42601). The LBP is lactoferrin species specific; human lactoferrin does not effectively block binding of bovine lactoferrin. The invention provides recombinant vectors, transformed ferricells and methods of producing recombinant bovine LBP of S. uberis. The bovine LBP, immunogenic fragments and/or chimeric proteins can be used, either alone or in combination with other antigens, in novel subunit vaccines for the prevention and treatment of S. uberis infections, particularly mastitis, as well as in diagnostic methods for determining the presence of S. uberis infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 2; Fig
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    lactoferrin - associated treatment and prevention

                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity in activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 20; Page 3425-3427; 6221pp; English.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukarytes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins

The present invention relates to immunogenic proteins, referred as Bt allergen, is derived from domestic mite, Blomia tropicalis. The specific Bt allergens of the invention includes Btll, Btl0, Bt5 and BtA2. The immunogenic protein is useful for preventing, reducing or ameliorating Blomia tropicalis hypersensitivity condition such as atopic dermatitis, immediate hypersensitivity, systemic anaphylaxis, allergic rhinitis or asthma and for modulating an immune response directed to Bt allergen in a subject. The Bt allergens are also useful for detecting antibody directed to all or a part of Bt allergen in a biological sample from a subject. Antibodies to Bt allergens are also used as therapeutic or diagnostic agents, to screen Bt immunoassays and as antagonists to inhibit Bt activity under circumstances where temporary hypersensitivity by Btll toolymorphic variant

The present invention relates to immunogenic proteins, referred to as B. allergens, derived from domestic mite (Blomia tropicalis). The specific Bt allergens of the invention includes Bt11, Bt10, Bt5 and BtA2. The immunogenic protein is useful for preventing, reducing or ameliorating Blomia tropicalis hypersensitivity condition such as atopic dermatitis, immediate hypersensitivity, systemic anaphylaxis, allergic rhinitis or asthma and for modulating an immune response directed to Bt allergen in a subject. The Bt allergens are also useful for detecting antibody directed to all or a part of Bt allergen in a biological sample from a

The Bt allergens are also useful for detecting antibody directed to all or a part of Bt allergen in a biological sample from a subject. Antibodies to Bt allergens are also used as therapeutic or diagnostic agents, to screen Bt immunoassays and as antagonists to inhibit Bt activity under circumstances where temporary hypersensitivity inhibition is required. The present sequence is Btil allergen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; cytokine; cell proliferation; cell differentiation; gene th vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; hammonomodulatory; cancer; leukaemia; nervous system disorder; arthritis; inflammation.

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2001-476283/51.

The SM1 coding sequence was isolated from a mouse embryo cDNA library using probes based on the rabbit smooth muscle myosin heavy chain SM2 isoform. The isolated coding sequence is included in the gene therapy vector of the invention. The vector of the invention consists of the coding sequence inserted into a retrovirus, adenovirus, associated adenovirus or animal-expression plasmid vector (such as pCXN2 or PAGE208). The vector can be used in the gene therapy treatment of particularly for the reduction of restenosis occurring corporate agreement of the reduction of restenosis occurring the company of the reduction of restenosis occurring corporate acceptance of the reduction of restenosis occurring corporate acceptance of the reduction of restenosis occurring corporate of the corporate of the reduction of restenosis occurring corporate of the cor

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16176-ABL30511).
vaccine; peptide therapy; stem cell growth factor; tissue growth factor; immunomodulatory; cancer; len nervous system disorder; arthritis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, immunomodulatory activity and activiny/inhibin activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Zhao

                                                                                                                                                                                                                                                      The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

AAM25963. The proteins can have activities based on the tissues and cells they are expressed in such as: antiinflammatory; antirheumatic; antiarthritic; immunosuppressive; antibacterial; endocrine; cardiant; central nervous system; virucide; anti-HIV; fungicide; antiuntagen; cardiovascular; antianaemic; antiaggregant; haemostatic; vulnerary; antiulcer; osteopathic; dermatological; antiallergic; antiasthmatic; antidabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; and immunostimulant. The proteins and polynucleotides encoding them can be used in gene therapy, antisense therapy and vaccine production. The proteins and polynucleotides are useful for screening for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   anti-HIV; fungicide; antimutagen; cardiovascular; antianaemic; anaemia; antiaggregant; haemostatic; vulnerary; antiulcer; osteopathic; eczema; dermatological; antiallergic; antiasthmatic; antidiabetic; cytostatic; neuroprotective; antidepressant; nootropic; antiparkinsonian; infection; immunostimulant; gene therapy; antisense therapy; vaccine; inflammation; antianaphylactic; rheumatoid arthritis; septic shock; pancreatitis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     antianaphylactic; rheumatoid arthritis; septic shock; pancreatitis; cardiac dysfunction; neuropathology; cardiac anaphylaxis; autoimmunity; genetic disease; haematopoietic disorder; platelet disorder; asthma; thrombocytopaenia; osteoporosis; severe combined immunodeficiency; allergic rhinitis; diabetes; multiple sclerosis; depression;

Cytokines) and the polynucleotides encoding them. The protein is useful C cytokines) and the polynucleotides encoding them. The protein is useful C and antagonists). The proteins and nucleic acids are useful as an array for mismatch CC detection. The proteins and nucleic acids are useful as an array for mismatch CC sources or supplements. The protein exhibits exhibits activity relating CC to cytokine, cell proliferation, cell differentiation, antiinflammatory, CC stem cell growth factor activity, immune stimulating or immune CC suppressing and activin or inhibin related activities. The proteins (and CC antibodies raised against them) and nucleic acids are therefore useful in CC the diagnosis and treatment of diseases and disorders such as cancer. CC central and peripheral nervous system diseases and neuropathies, CC Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, spinal cord disorders, head trauma, cerebrovascular CC thrombocytopaenia, stem cell disorders, aplastic anaemia, for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, for CC treating osteoporosis, osteoparthritis, bone degenerative disorders, or periodontal disease, lung or liver fibrosis, reperfusion injury in CC severe combined immunodeficiency (SCID), bacterial or fungal infections, CC diabetes mellitus, myasthenia gravis), allergic reactions and conditions, CC diabetes mellitus, myasthenia gravis), allergic reactions and conditions, CC diabetes mellitus, myasthenia gravis), allergic reaction disorders, conditions, septic shock, sepsis, arthritis, nephritis and inflammatory bowel disease, viral infection and are useful in altering bodily collaractoristics. The present sequence represents a novel protein of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New polypeptides and nucleic acids, useful for diagnosis, treatment inflammatory, autoimmune, neurological, myeloid or lymphoid cell, but degenerative disorders, cancer and promoting wound healing.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated human polypeptides (which may be

The sequences given in AAB47277-79 show proteins which were identified CC using a yeast two-hybrid system described in the specification. For this Sequence, amino acids encoded by nucleotides 433-1003 of MAPKAP-K3 were CC used as balt.cDNA's encoding the balt protein were generated from brain CC added to their 5' ends to allow recombination into the vector pGBTO. The CC primer tail sequences are given in AAC85838-39. The tailed PCR product was then introduced into pGBTO, and the new construct was directly CC selected in the yeast J693 for its ability to drive tryptophan CC synthesis. In these yeast cells, the balt is produced as a C-terminal fusion protein with the DNA binding domain of the transcription factor CC into yeast strain J692 and selected for the ability to drive leucine Synthesis. In these yeast cells, each cDNA expressed as a fusion CC yeast strain J692 and selected for the ability to drive leucine Synthesis. In these yeast cells, each cDNA expressed as a fusion CC 768-881) and a 9 amino acid hemagglutnin tag. J693 cells expressing the balt were then mated with J692 cells expressing proteins from the CC brain library. The resulting diploid cells expressing proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating

This sequence represents human transport-associated protein-8 (TRATE TRANSPORT) The DNA sequence was first identified in a human colon tissue cDNA library. The full-length cDNA was derived from a series of overlapping and/or extended cDNA sequences and is a consensus. TRANP-1 to 9 (AAY31639·731647) are a novel group of proteins with chemical and structural homology that are involved in molecular transport. Various disorders are associated with defects in the transport. Examples of such disorders include cystic fibrosis, multidrug resistance, hypercholesterolaemia and certain forms of constitutions.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         noradrenaline, leading to hypertension. TRANP is expressed in cancer cells, and transport disorders result from either excessive or insufficient molecular transport. Anti-TRANP antibodies and nucleic acids encoding TRANP can be used as diagnostic tools for such disorders. TRANP antagonists can be used to treat or prevent a cancer associated with increased TRANP expression. Anti-TRANP antibodies can be used directly as an antagonist or as a targetting mechanism for drugs. Alternatively, a a TRANP antisense nucleotide can be used to treat cancers. A TRANP agonist or expression vector may be used to treat a disorder caused by reduced transport of biologically active molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   example, the BRCA1 protein, associated with familial breast cancer, is normally imported into the nucleus via nuclear pore complexes, but it aberrantly located in the cytoplasm in breast cancer cells. In other cancers, cells can secrete excessive amounts of hormones e.g. cancers the adrenal medulla can secrete excessive amounts of adrenaline and

The invent useful in developmental biology and in elucidating cell signalling cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLJ01640-ABLJ6175) and the encoded proteins (ABBJ01840-ABLJ6175) and the encoded proteins

The EGFR is not thought to interact with known second messenger systems efficiently and for this reason there is a need to ascertain the mechanism by which the EGFR functions in mitogenesis. eps15 has been isolated and found to be tyrosine phosphorylated by the EGFR tyrosine kinase and hence involved in the regulation of mitogenic signals. eps15 polynucleotides can be used to develop prods. for the therapy, diagnosis and prognosis of neoplasia and other disorders connected with abnormal mitogenic signalling pathways. eps15 also enhances cell response to mitogenic

This is a human eps15 protein. The human and murine eps15 polypeptides or their fragments and conservative variants have the same biological activity as substrates in the pathway of epidermal growth factor receptor (EGFR) kinase. This is evidenced by tyrosine phosphorylation of the polypeptides or mitogen stimulation by the polypeptides upon activation of the EGFR kinase. The eps15 polypeptides are used for enhancing the response of cells to mitogenic factors and for determining the tyrosine

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human and murine eps (epidermal growth factor receptor pathway substrate) 15. Also described are purified antibodies that specifically bind to eps15 serving as a substrate for tyrosine phosphorylation following epidermal growth factor receptor (EGFR) activation, where the amino acids of eps15 hybridise under low stringency conditions to the protein-encoding domain of human or murine eps15 polynucleotides. The antibodies can be used to assay eps15 in samples. They can also be used to determine tyrosine kinase receptor (TKR) activity in samples and to detect altered mitogenic signal transduction, particularly in

```
immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as
                                                                                                                                                                                                                                                                                                                                 Tang

                                                                                                                                                                                   The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity, chemotractic/Chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    21-JAN-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilization of the activities where the content are supported to the content and the content and the content and the content are supported to the content and the content and the content are supported to the content and the content are supported to the content and the content are content and the content are content and the content and the content are content and the content and the content are content and the content and the content are content and the content and the content are content and the content and the content are content and the content and the content are content an
                                                                                                                                                                                                                                                                                                                   Human: nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Alzheimer's; Parkinson's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                       Homo

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activinyinhibin activity, chemotactic/chemokinetic activity, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tang

                                                                                                                                                                                                                                                                                                     This sequence represents TATA modulating factor (TMF). TMF is a protein of mol. wt. 123-130 kD which activates transcription in most genes, esp. in human immunodeficiency virus-1 (HIV-1) by binding to the TATA box region of the promoter. TMF is encoded by the short arm of human chromosome 3 in the region p12-p21 which is often involved in translocations in patients having lung and other types of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New protein cellular factor - capable of binding double stranded HIV-1 tata region and activating gene expression of HIV-LTR \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaynor RB,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TATA modulating factor; TMF; transcription; TATA box; promoter; HIV-1; human immunodeficiency virus-1; short arm; human chromosome 3; p12-p21;
